

What sets TCSJOHNHUXLEY's GFL Bonusing apart?

Gaming Floor Live's Bonusing module gives casinos the tools to customise their games, by providing accurate data into additional side-bets and creating tailored jackpots to help keep players at tables.

Features & Benefits

Design custom event-based or mystery progressives with jackpots spanning across various tables and game-types

Create multiple levels of jackpots

Customise the games: house edge, jackpot contributions etc. (subject to local regulations)

Have game content locked-in, to comply with local regulatory requirements.

Access data from anywhere in the world through the secure web-based dashboard.

Modify bet sensor colours and animations

Monitor real-time reports for insight into table and player data

Available as just one module of the Gaming Floor Live System

How GFL Bonusing Helps

GFL Bonusing gives casinos the tools to intelligently customise their games – helping them to keep players at the table and achieve the best hold possible. With this module of the GFL platform, operators can create multiple bespoke progressives and side bets for any table game, monitor the success of them in real-time and, if necessary, modify the game configurations instantly (subject to local regulations).

Increased Player Excitement & Attraction

Animated displays, bet sensors and floor-wide jackpots attract and excite players. Already popular games are instantly improved with large, accessible, prize pools that drive more participation and ultimately revenue.

The mystery jackpot inspires buzz and attracts crowds with its unique triggering sequence. As the RNG selects a winner, the bet sensors on the table randomly illuminate, slowing down until only the winner's bet sensor is highlighted. This dazzling feature builds floor-wide anticipation and player excitement.

A wide range of jackpot types

GFL Bonusing presents casino operators with the option to offer both mystery and event-based progressives and jackpots. Event-based progressives and fixed value jackpots are awarded as a result of a game-specific winning outcome, such as a Royal Flush in Poker.

Operators can control jackpot contributions and output triggers, among many other pre-defined options to enable either large prizes with low hit frequency, more frequent small prizes, or a mixture of both.

The system has the ability to add mystery jackpots that use a random number generator (RNG) to select participating player(s) as the winner(s). Operators can control the average value and frequency of their mystery jackpots. This option can be enabled or disabled depending on regional regulatory restrictions.

Dazzling Side Bet Technology

Bet sensor colours and animations are completely customisable with the GFL Bonusing module. Operators can configure their bet sensors to pulsate, spin and sparkle in any colour, simply by accessing their browser-based GFL dashboard and changing a few configurable options.

Casinos can also modify event triggers that integrate with table displays. For instance, bet sensors can illuminate to match the colours of on-screen jackpots in order to indicate which prize pool has been won by a participant.

Easy to Integrate

Integrating the GFL Bonusing module is fast and easy, since very little hardware is needed in addition to the TIB configured table. In order to add on the module, only bet sensors, a base game and an e-FX™ table Display by TCSJOHNHUXLEY is required. Other third-party displays may be used in place of an e-FX™ Display, with the purchase of the GFL Interface module.

Some bonusing games may be restricted contrary to permitting jurisdictions

Regulation-Friendly Game Flexibility

The GFL Bonusing system offers a wide range of pre-defined gaming options that can be altered to suit your unique casino needs. By accessing the browser-based dashboard, operators can change game wagers, house edges, jackpot contributions, jackpot types, prize pool details and output triggers based on player preferences and demographic.

The flexibility of the bonusing system allows game content options to be locked, in order to comply with local regulatory requirements. This feature maintains game security and integrity, while also allowing casinos the freedom to quickly configure all other game content. TCSJOHNHUXLEY offers consultations for designing jackpots and configuring game content.

Real-Time Reporting

GFL Bonusing offers real-time, fixed reporting for insight into table and player data. Operators can now view information such as revenue per table (reconciliation reports), players per table, revenue per dealer shift and payouts per dealer just by accessing their easy-to-use browser-based GFL dashboard.

Let's get technical
