What sets the TCSJOHNHUXLEY Dice Shaker apart?
The TCSJOHNHUXLEY Dice Shaker ranges automated function allows for a fully randomised outcome.

Features & Benefits
- Designed for multiple dice
- Multi-game mode available
- Comes with a tamper proof sealed dice unit
- Simple to use for the dealer
- Robust and reliable to withstand 24-hour operation
- Can be interfaced to any Electronic Table Games or third-party systems
- Optional Automatic Dice Recognition available
- Multiple operation modes available
- Game status indicated with colourful LED lights (Dice Shaker 2)
- Full communication with Gaming Floor Live (Dice Shaker 2)

Dealer Flexibility
With a multi-game mode to allow even greater flexibility, the dealer can choose to shake the dice before the betting period is started and the lid remains on. Alternatively, bets are placed with the lid off and after ‘No More Bets’ the dice are shaken in full view of all the players.

Automatic Dice Recognition Controller
ADR is a technology that allows the automatic recognition of the dice in a shaker. The system consists of a controller, a camera and lighting assembly that is fitted into a dice shaker cover. There is also a collar that fits over the existing base of the glass dome.

The system is designed to be driven from a Sicbo server PC or an online gaming application. On command, the ADR unit will process the dice image from the camera inside the cover and return the result of the dice in the dome. There is a game status LED indicator built into the handle of the cover to alert when the dice have been verified.

Dice Shaker
The automated Dice Shaker is fully integrated as part of the Sicbo game electronics, giving integrity to the game sequence whilst protecting against the possibility of a non-shake or double shake of the dice. Available with a choice of dealer interface systems and an optional Automatic Dice Recognition System (ADR). Our Automated Dice Shaker is widely used in jurisdictions all around the world including Australia, New Zealand, Macau, Singapore, Malaysia, Philippines, Europe, United Kingdom, North America and South America.

Dice Shaker 2
Dice Shaker 2 is similar to the original, but differs in shake-style. It also includes new LED lights and fully integrates with the Gaming Floor Live platform. The shaking for Dice Shaker 2 is driven by a speaker, as opposed to a solenoid like the original automatic Dice Shaker. This results in a smoother rolling of the Dice instead of the pump-style shake. This also allows operators to control the duration and intensity of the shake. In addition, Dice Shaker 2 comes equipped with LED lights around its rim to indicate various game states during play. If there is no game activity, the shaker will display an attract sequence to entice players to the table.
